📍 remote

I am a backend (Java) software engineer with 4+ years of professional experience and passion for clean and performant code. I build distributed, robust and fault tolerant services for businesses. I'm also interested in ML (scikit-learn, pytorch) and mobile development (Flutter) in my free time.

work experiences

Total - 4 years 9 months

Software Engineer *Align Technology inc. | Full-time | 2020 - present*

Developed new microservices and enhanced backend systems for client-centric applications, such as the web page that manages patient care or API for clinical trials. Assigned as a scrum-master in the team who tracks activity, reviews sprints and release-cycles.

Webinar Teacher *GeekBrains | Contractor | 2020 - 2021*

Prepared and conducted lectures and homeworks on Java and Spring Framework. Mentored students throughout the course.

Java Developer *Business Environment | Full-time | 2019 - 2020*

Developed the backend for an educational online-platform. Designed microservice architecture, participation in task scheduling and code reviews.

Junior Java Developer *E-COM | Full-time | 2019 - 2019*

Developed the backend for the enterprise, document management system for retail. Designed microservices and the architecture.

Performance Test Engineer *Aplana Software | Full-time | 2017 - 2019*

Made scripts in C, servlets and web services (stubs) in Java. Created test cases, carried out load testing for banking software and analysis of the results.
